

Att'y Docket: 1779.01

Claim Amendment under 37 CFR 1.121(c)

Claims 1. - 8. (Cancelled)

- 5 Claim 9. (Currently amended) An image display device comprising:
- a) a case comprising an opening;
 - b) a luminous source image display displaying a first image, wherein the source image display
10 is positioned within the case; and
 - c) a focusing element receiving light from the source image display and focusing the light to
15 form a second image that is viewable through the opening of the case, wherein the focusing element is positioned within the case;
wherein the focusing element comprises a concave mirror and a mirror supporter that supports the concave mirror, and wherein the perimeter of the concave mirror comprises at least one straight-cut
20 portion that has a line contact with the mirror supporter, wherein a flexible strip is provided between the straight-cut portion and the mirror supporter.

25 Claims 10. - 12. (Cancelled)

- Claim 13. (Currently amended) An image display device comprising:
- a) a case comprising an opening;
 - 30 b) a luminous source image display displaying a first image, wherein the source image display is positioned within the case; and
 - c) a focusing element receiving light from the source image display and focusing the light to

Att'y Docket: 1779.01

form a second image that is viewable through
the opening of the case, wherein the focusing
element is positioned within the case;
wherein the focusing element comprises a concave
5 mirror and a mirror supporter that supports the
concave mirror, and wherein the perimeter of the
concave mirror comprises at least one straight-cut
portion that has a line contact with the mirror
supporter, wherein the mirror supporter comprises
10 two side panels and a back panel that connects the
two side panels, wherein the perimeter of the
concave mirror comprises two of the parallel
straight-cut portions, wherein the two side panels
form line contacts with the two straight-cut
15 portions, wherein each of the side panels comprises
a pivot axis around which the mirror supporter can
pivot, wherein one of the side panels further
comprises a lock member that blocks pivoting of the
mirror supporter.

20

Claim 14. (Currently amended) An image display device
comprising:

- a) a case comprising an opening;
- b) a luminous source image display displaying a
25 first image, wherein the source image display
is positioned within the case; and
- c) a focusing element receiving light from the
source image display and focusing the light to
form a second image that is viewable through
30 the opening of the case, wherein the focusing
element is positioned within the case;
wherein the focusing element comprises a concave
mirror and a mirror supporter that supports the
concave mirror, and wherein the perimeter of the

5 concave mirror comprises at least one straight-cut
 portion that has a line contact with the mirror
 supporter, wherein the mirror supporter comprises
 two side panels and a back panel that connects the
10 two side panels, wherein the perimeter of the
 concave mirror comprises two of the parallel
 straight-cut portions, wherein the two side panels
 form line contacts with the two straight-cut
 portions, wherein the back panel comprises at least
15 one supporting portion that supports the concave
 mirror between the side panels.

Claims 15. - 17. (Cancelled)

15

Claim 18. (Currently amended) An image display device
 comprising:

a) a case comprising an opening;
 b) a luminous source image display displaying a
20 first image, wherein the source image display
 is positioned within the case; and
 c) a focusing element receiving light from the
 source image display and focusing the light to
 form a second image that is viewable through
25 the opening of the case, wherein the focusing
 element is positioned within the case;
 wherein the focusing element comprises a concave
 mirror and a mirror supporter that supports the
 concave mirror, and wherein the perimeter of the
30 concave mirror comprises at least one straight-cut
 portion that has a line contact with the mirror
 supporter, further comprising an image source that
 provides image information to the source image
 display, whereby the source image display displays

Att'y Docket: 1779.01

the first image, further comprising a sensor device that senses position of a user's hand in a plane at the opening.

5 Claim 19. (Original) The image display device of claim 18, wherein the position sensed by the sensor device is used to change the image information provided by the image source, whereby the second image is changed by interaction with a user.

10

Claim 20. (Cancelled)

15 Claim 21. (Currently amended) An image display device comprising:

- a) a case comprising an opening;
b) a luminous source image display displaying a first image, wherein the source image display is positioned within the case; and
20 c) a focusing element receiving light from the source image display and focusing the light to form a second image that is viewable through the opening of the case, wherein the focusing element is positioned within the case;
25 wherein the focusing element comprises a concave mirror and a mirror supporter that supports the concave mirror, and wherein the perimeter of the concave mirror comprises two parallel straight-cut portions, each of which has a line contact with the
30 mirror supporter, wherein flexible strips are provided between the straight-cut portions and the mirror supporter.

Att'y Docket: 1779.01

Claim 22. (Original) The image display device of claim
21, wherein the mirror supporter can be pivoted
whereby the concave mirror can be pivoted.

5 Claim 23. (Cancelled)
